

Crossover

Provides a mechanical and signal routing connection to third-party toolstrings

Applications

- Connects Weatherford toolstrings to third-parties
- Provides termination for tool busses
- Combines with terminated bull nose to terminate HD Buss

Features and Benefits

- Facilitates electrical and mechanical connection between tools

Tool Description

The Weatherford crossover enables the connection of tools with dissimilar mechanical and electrical configurations into a seamless combination.

This crossover would be placed above a Weatherford toolstring to allow the connection of compatible services above. The crossover also terminates the busses and facilitates connection of a terminated bullnose below to terminate the HD bus.
